Foam Saw Owners Manual

DT40

*****CAUTION*** SHARP BLADE- HANDLE & USE WITH CARE.**

LUBRICATION **MUST READ**

ROWLEY Company recommends that the blades be sprayed frequently with our Silicone Spray (stk# AS15) for maximum saw performance.

The purpose of the lubrication is to reduce heat and friction on the blade. Accordingly, the lubricant should be applied to both sides of the blade and rollers located on the underside of the foot.

CLEANING

Use only a damp cloth to clean this tool. Do not use turpentine, lacquer, dry cleaning fluids, gasoline, or other similar products.

FOAM ADHESIVE

When joining 2 or more pieces of foam, use our Spray Adhesive (stk# AS30). Be sure to wait until the adhesive is completely dry before cutting with the foam saw.
