

Instructions for Removing the 10" Adhesive Roll from the 10" Lint Roller Handle Assembly

DT82 10" Wide Lint Roller Set

If you cannot easily slide the adhesive roll from the handle assembly please enlist the help of another person and try the following:

1. Stand facing the other person. Grasp the adhesive roll with both hands and point the protruding handle assembly toward the other person so they can grasp the handle close to where it disappears into the end of the adhesive roll.

2. While holding the two components as securely as possible, pull away from each other until the adhesive roll is completely removed.

3. After removing the adhesive roll turn the blue plastic roller until you see five protruding fins in a row. There will be two sets of five fins opposite each other. Carefully bend both sets of fins toward the end of the roller with the protruding handle assembly.

NOTE: NEVER bend the fins 180°. This may result in the fins breaking off completely. Always bend the fins less than 90° in one direction toward the handle assembly.

4. Slide the adhesive roll onto the blue plastic roller to test for resistance. Adjust the fins accordingly.
